

Synopsis of FM hypertext commands

Command (drop down list in FM)	Syntax	Example ^{a)}	Valid in			
			Doc	PDF ^{b)}	HTML ^{c)}	Menu/TB ^{d)}
Alert ^{e)}	<code>alert text</code>	<code>alert</code> Time for lunch now! ^{f)}	Y	Y	N	Y
Alert with title ^{e)}	<code>alerttitle title:text</code>	<code>alerttitle</code> Hello - I'm the title:This is in the first line\x0dand this is in the next.	Y	Y	N	Y
Specify named destination	<code>newlink name</code>	<code>newlink</code> here_we_go	Y	Y	Y	N
Jump to named destination	<code>gotolink name</code>	<code>gotolink</code> hereafter	Y	Y	Y	N
Jump to ... and fit to page	<code>gotolinkfitwin path:link</code>	<code>gotolinkfitwin</code> hereafter			y	N
Jump to first page in file ^{g)}	<code>gotolink path:firstpage</code>	<code>gotolink</code> dummy.fm:firstpage	Y	Y	N	Y
Jump to last page in file	<code>gotolink path:lastpage</code>	<code>gotolink</code> dummy.fm:lastpage				
Jump to page number	<code>gotopage path:pagenumber</code>	<code>gotopage</code> dummy.fm:2 ^{h)}	Y	Y	N	Y
Jump to previous page / next page of current document	<code>previouspage</code> <code>nextpage</code>	<code>previouspage</code> <code>nextpage</code>	Y	Y	N	Y
Jump back (to last view)	<code>previouslink</code>	<code>previouslink</code>	Y	N	N	N
Jump Back & Fit To Page	<code>previouslinkfitwin</code>	<code>previouslinkfitwin</code>				
Open document	<code>openlink path</code>	<code>openlink</code> dummy.fm				
Open document ... and fit to page (same type as source: fm or pdf) ^{f)}	<code>openlinkfitwin path</code>	<code>openlinkfitwin</code> dummy.fm	Y	Y	Y	Y
Open Document As New	<code>opennew path</code>	<code>opennew</code> H:/Adobe/framemaker.13en/AdobeFrameMaker2015/Templates/Book/Chapter.fm	Y	N	N	Y
Open document at first/last page ^{g)}	<code>openlink path:firstpage</code> <code>openlink path:lastpage</code>	<code>openlink</code> dummy.fm:firstpage <code>openlink</code> dummy.fm:lastpage	Y	Y	Y	Y
Open document at page number	<code>openpage path:pagenumber</code>	<code>openpage</code> dummy.fm:2	Y	Y	Y	Y
Go to URL	<code>message URL url</code>	<code>message URL</code> http://www.daube.ch/docu/fmaker00.html	Y	Y	Y	Y
Message client: Open document with associated application	<code>message openfile pathⁱ⁾</code>	<code>message openfile</code> C:\Windows\win.ini	Y	Y	N	Y ^{j)}
Launch Windows application	<code>message winexec application path[,windowstate]^{k)}</code>	<code>Start</code> the Windows calculator (C:\WINDOWS\System32\calc.exe)	Y	N	N	Y

Command (drop down list in FM)	Syntax	Example ^{a)}	Valid in			
			Doc	PDF ^{b)}	HTML ^{c)}	Menu/TB ^{d)}
Popup menu (works only in FrameMakerView mode) <div style="border: 1px solid gray; padding: 5px; margin-top: 10px;"> Variables Cross references Update references Footnotes Hyperlinks Bibliographies </div>	<code>popup textflow_on_refpage</code> Popup Menu Sample Variables ^T Cross references ^T Update references ^T Footnotes ^T Hyperlinks ^T Bibliographies ^T	<code>popup popup1</code> The marker in the text flow contains a hyper-text command <code>gotolink xxx</code> with <code>xxx</code> being the name in a hypertext marker <code>newlink xxx</code> at the location to be jumped to with the menu.	Y ^{l)}	N	N	N
Button matrix	<code>matrix nrows ncolumns flowname</code>	Equation palette, Vertical toolbar	Y	N	y	N
Close current window	<code>quit</code>	<code>quit</code>	Y	M	N	N
Close all hypertext windows	<code>quitall</code>	<code>quitall</code>	Y	M	N	N
Exit Framemaker application	<code>exit</code>	<code>exit</code>	Y	M	N	N

Notes

- a Be aware that not all examples will work on your system.
- b M: equivalent function from Acrobat menu available.
- c Y = works in principle, but certain restrictions apply.
- d Hypertext commands indicated with Y work in `menus.cfg` files. The same commands work in toolbar files (e.g. `quick-access.xml`) only, if also used in a menu! This can be a menu which is not inserted in an existing menu (I call this an orcus-menu). See *Menu and tool bar files* on page 4.
- e In PDF this will be a text note, the title will not be presented as such, but stay within the text. See also *Difference in presentation* on page 3.
- f To get line breaks in the alert and alerttile display, use `\x0d` in the FM-document and `\x09` in command config files. Inspecting the hypertext marker later will display the `\x0d` as blank. A tab may be inserted as `\r` in the FM document and as `\x08` in config files.
- g FrameMaker hyperlinks have two variations: `goto` and `open`. The `goto` variation displays the target document in the current window (closing the currently-displayed file); the `open` variation displays the target document in a new window, leaving the current document open. If you hold the Shift key when activating a link/cross-ref with `Ctrl+Alt/link` (that is, `Ctrl+Alt+Shift+click`), the `goto...` is interpreted as an `open...` action (and vice versa).

- h The current document will be closed (user prompt, if edited), before the linked document is opened. “Jump Back” opens the current document again.
- i For this command both the backslash and the solidus are allowed in path names.
- j If the file is a binary script, it will be opened in Notepad rather than executed.
- k The window state is a string constant such as SW_SHOWMAXIMIZED (see help for more).
- l To test a popup switch the document to View only by locking it. The flow with same name as the popup must be located on a reference page.

File paths

In file paths or URLs the backslash is not valid. The solidus (normal slash) must be used. Both absolute and relative paths (relative to current document) are possible.

same folder	message URL file.ext
sub-folder	message URL subfolder/file.ext
parallel folder	message URL ../folder/file.ext
one level above	message URL ../../upperfolder/file.ext

This destination is used in the example hyperlinks above.

Target of gotolink

Difference in presentation

In FM document

Both in the FM document and in the cfg files the carriage return and the TAB need unusual coding.

```

<title The title line:Some text in line one\r\x09Just
after a tab\r•\x09Bullet, then TAB\rSome bullet characters:•
» » ...

```

In the document the hypertext command uses Unicode which gives a rich set of special characters. The contents of the hypertext statement is listed hereafter.

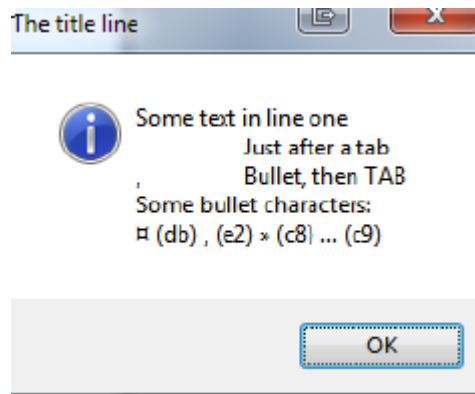

In cfg file

The cfg files must be in Windows 1252 code page and use the FrameRoman coding for special characters.

```

<Command Test01 <KeySequence \!991>
  <Hypertext alerttitle The title line:Some text in line
one\x09\x08Just after a tab\x09\xe2\x08Bullet, then
TAB\x09Some bullet characters:\x09\xdb (db) \xe2 (e2) \xc8
(c8) \xc9 (c9) >>

```

Menu and tool bar files

menus.cfg

Command definition

```
<Command ETBtest1 <Label ETB test hypertext commands>
  <Hypertext alerttitle Test Hypertext Commands: Just a simple text to test the West\x09And
  this is on the next line>>
<Command ETBtest2 <Label ETB test hypertext commands>
  <Hypertext message openfile C:/Users/Klaus/Documents/Adobe Scripts/ETB/ETBnudge.jsx>>
```

Use in orcus-menu An orcus menu (my personal naming) is a dead end. It is not connected to any existing menu, hence not visible.

```
<Menu ETBDummy                    <Label Orcus for toolbar commands only>>
<Add ETBtest1 <Menu ETBDummy>>
<Add ETBtest2 <Menu ETBDummy>>
```

quick-access.xml

```
<ACTION command="ETBtest1">
  <images base="etb-icons\testing"/>
</ACTION>
<ACTION command="ETBtest2">
  <images base="etb-icons\testing"/>
</ACTION>
```
